

Complete Solar Projects Before Winter

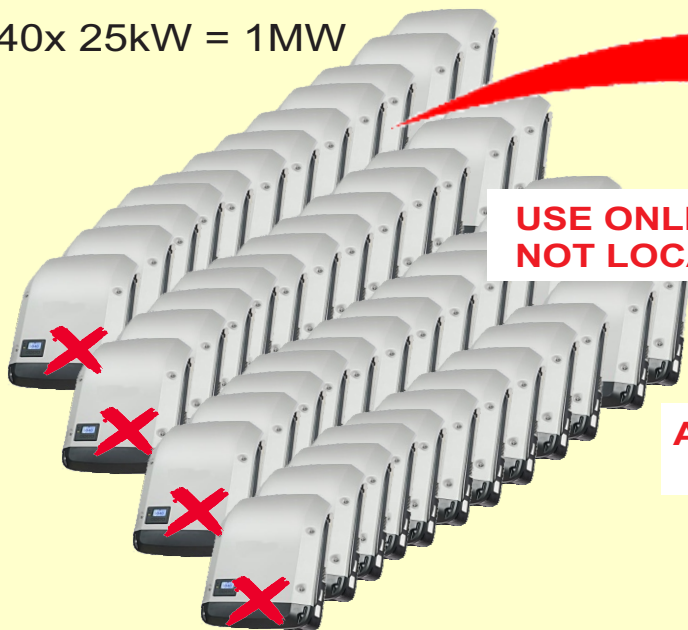

With winter approaching, there is pressure to get new projects completed before cold weather and snow arrives. Correct operation of all equipment and panels needs to be verified during commissioning. A **SolarVu[®]** energy portal gives detailed online displays of all measured inverter and equipment values. This expedites finding any installation issues leading to faster project completion, customer sign off and payment. Contact Cachelan with details of your project to receive a SolarVu quote and SLD to match the system with fast SolarVu portal shipment turnaround from order. Experience the benefits of comprehensive monitoring and diagnostics before startup then use the O&M tools to maximize output after grid connection with SolarVu.

Instead of using tedious LCD inverter displays, click to view all equipment values during commissioning for faster setup, troubleshooting and signoff.

SELECT INVERTER

40x 25kW = 1MW

**USE ONLINE SCREENS
NOT LOCAL LCD DISPLAY**

Reduce Commissioning Time for Faster Project Completion

- ✓ Click to view all equipment values
- ✓ Diagnostic Analyzer tools
- ✓ Daily progress photos with SnoCam
- ✓ Download manuals, drawings, layouts
- ✓ Print reports for sign off records
- ✓ Performance - actual to forecast output
